

Short Bio Daniel Zolg

Daniel obtained his Dr. rer. nat. at the Technical University of Munich in Germany in the laboratory of Prof. Bernhard Küster. During his studies, he led the generation of the largest resource of synthetic standards, termed ProteomeTools. His work focused on exploiting this unique resource for the creation of molecular and digital tools for proteome research. Together with colleagues from the Küster lab, Daniel incorporated MSAID with the goal of aiding mass spectrometry-based proteomics with artificial intelligence-based software. As chief operating officer Daniel is overseeing the operations at MSAID.
